## EXPERIENCE

Noble Software(Dian-Alfabet) — *Frontend Developer*  https://portalsekolah.co.id/

Feb 2022 - Aug 2023

Dian-Alfabet is a product-oriented company offering an E-learning web application based in south-east asia. The platform accommodates school registrations, enabling students to access features registered by their respective schools. Students can engage in various activities including attending online classes, accessing study materials, applying for leaves, selecting electives, participating in examinations, and more.

- Utilized enhanced React lifecycle methodologies to mitigate redundant re-renders within the application, resulting in a notable 12% enhancement in app performance.
- Developed a user-guided tour feature designed to enhance the initial user experience by providing an interactive walkthrough upon the user's first visit to the application interface.
- Leveraged Redux to efficiently manage API data retrieval and storage, significantly reducing the frequency of API calls and thereby accelerating page loading times by 500%.
- Maintained regular communication with the backend team to address any impediments or API-related challenges, ensuring timely deployment of new features within the designated timelines.

**Tech Stack:** React JS, Redux, Bootstrap

## Visiram Solutions, Hyderabad— *Product Developer*

Jul 2020 - Jan 2022

Visiram Solutions is a burgeoning startup specializing in the delivery of web and mobile application development services.
